📍 Edmonton Alberta, Canada

Education

University of British Columbia, Bachelor of Applied Science

2022 – 2027

- **Anticipated coursework:** Mechanics I, Introductory Physics for Engineers II
- **Completed coursework:** Introduction to Engineering I, Introduction to Computation in Engineering Design

Experience

UBC Uncrewed Aircraft Systems

2022 – present

- **Wing Specifications:** Responsible for selecting airfoils and designing wings for new 2023 aircraft
- **Wing Analysis:** Ran analysis on wings using simulation XFLR5 and XFOIL to obtain lift values and moments generated by control surfaces
- **Wing CAD:** Used SOLIDWORKS to create production ready CAD of the aircraft wings
- **Landing gear CAD:** Designed and modeled CAD for the landing gear of an aircraft with a 14% weight reduction over previous iteration.

Projects

Sonar Depth Sensing

2023

- Used MATLAB to display real time data from GPS and IMU sensors
- Implemented a Kalman Filter to process sensor data to reduce uncertainty in measurements
- Created a custom PDB to manage connections to Arduino
- Used depth data from a underwater distance sensor with positional measurements to create a bathymetric map

Single Axis Solar Tracker System

2022

- Arduino code for controlling tilt of solar tracking system
- Circuit diagram of components
- Signal processing of data obtained from the solar tracker

Skills

Electrical design, Signals Processing, Controls, Embedded Systems, C & C++, MATLAB, SOLIDWORKS, Manufacturing
